Energy

As energy companies continue to face additional regulatory challenges and renewable energy businesses continue to evolve, we provide a wide variety of legal services to assist our clients throughout the state of Florida. Firm attorneys across multiple disciplines provide integrated legal services to energy companies, utilities, government entities and property owners. Services range from site location assistance at the local and state levels, through the application submittal process and permit condition negotiations. Our multi-faceted team provides counsel on the many issues that require attention to detail for our energy clients, including addressing [intellectual property issues](#), capital transactions, and [state and federal tax](#) and regulatory issues. For the benefit of our clients, we maintain strong strategic alliances with consulting partners, environmental engineers and consultants, permitting authorities and regulatory agencies. In addition, our attorneys have experience in addressing the many local issues that can ultimately effect the overall success of any given project, such as land use and zoning needs, regulatory entitlements and complex environmental permitting.
