

Services & Industries

Life Sciences

The life sciences landscape covers tremendous ground, as does our range of legal services in the life sciences market- from helping clients launch and protect their products, to advising clients in mergers, acquisitions and sales.

With hard science degrees and industry experience, our life sciences attorneys are complemented by a deep bench of corporate, tax, securities, intellectual property, supply chain, and employment attorneys to provide multi-dimensional counsel on the complex issues in the life sciences arena.

Clients include organizations in academia and industry, ranging from startups to publically traded companies in the fields of medical devices, biotechnology, pharmaceuticals, cosmeceutical, and diagnostics. Many of our clients are subject to regulation under the Food and Drug Administration (FDA), and our life sciences attorneys advise on FDA regulatory matters in addition to issues relating to licensing, research and development, technology transfer and commercialization.

In addition, our life sciences patent practitioners have prepared and prosecuted patent applications in all areas of the life sciences arena. We also assist clients in the negotiation of co-development and joint venture agreements, and with mediation, arbitration and, if necessary, litigation, when disputes arise.
